

The city of the future

A healthy environment for future generations

Erasmus+

What does a city of the future entail?

The cities of the future are green cities, and green cities are healthy environments.

Green cities are those that prioritize people's health by limiting pollution and "greening" abandoned urban areas.

The European Commission rewards cities in EU states that can prove that they are making serious efforts in this regard, and the criteria for awarding the European Green Capital title are as transparent as possible.

What must the cities of the future do to be considered green?

Past winners include cities famous for their quality of life such as Stockholm, Copenhagen, Hamburg, Oslo or Lisbon. The list of criteria is impressive and covers all aspects of city life: air quality, noise, waste, water and biodiversity management.

The cities of the future must demonstrate the will and ability to implement long-term projects beneficial to local communities.

A green city must offer people a healthy life, and a healthy life is an effective way of maintaining our health and reducing the risks of illness.

Let's imagine a city from the
future!

What do we need for a healthy city of the future?

For a green city of the future, where citizens are not exposed to risks that lead to illness, we need the following things in place:

Reduced energy consumption, which could be achieved through greater recycling and use of tidal, wind or solar energy.

Transport that could be environmentally friendly if we used more means of transport that run on electricity, which would also help reduce noise pollution.

People's healthier nutrition, if the stores only bring goods from local sources

Using plants for as many purposes as possible, even in design

Reduced traffic if we walked more, or used bicycles

Activities and events with a role in cleaning the city

Modern hospitals with all the necessary resources

Using robots to do physical jobs

For these things we need specialized people

All changes start with us, the people, and we need people specialized in many fields to succeed. The green jobs of the future that can make a difference are:

- Programmers
- Doctors (nutritionists, psychologists, psychotherapists, etc.)
- Engineers
- Farmers
- Architects

Our team

Students:-Teodora Maria Pedestru

-Ionel Bogdan Tudor

-Vlad Alexandru Ciama

-Mara Mavrodin

-David Maluselu

-Teodora Maria Nistor

-Antonio Alexandru Badea

-Victor Mihail Dogaru

-Emma Maria Juganaru

-Adina Paula Marian

-Carmen Elena Ursu

-Luca Alexandru Saileanu

Teachers:-Veronica Mustatea

-Raluca Corina Dawed

-Irina Maria Maerut

-Ana Maria Cretu

An aerial photograph of a modern architectural complex. The central feature is a large, rectangular building with a flat roof covered in a dense grid of green plants, likely a rooftop garden. To the left of this building is a curved, multi-level courtyard with a light-colored wall and a small, covered outdoor seating area. The surrounding area includes other buildings, walkways, and more greenery. The sky is blue with soft, white clouds, and there are some lens flare effects in the corners.

We can do so many beautiful things
together!

Thank you for your attention!
